OVERVIEW

MangoApps Training is a native learning system: author courses from text, video, documents, or an uploaded SCORM/xAPI package, sequence them into learning paths, and gate progress with auto-graded quizzes. Completing a course issues a branded, publicly verifiable certificate, and when a course is set to award one, a real skill or certification on the employee's Skills & Certifications profile.

AI can turn a topic or an uploaded document into a full draft course and quiz — a person reviews and publishes it, nothing goes live unassisted. The same AI Console watches for new hires needing required training, training gone overdue, and certifications about to expire, then either queues the action for an admin to approve or runs it automatically.

Businesses that don't want to author everything themselves can license ready-made titles from the Go1 or OpenSesame catalog and assign them alongside their own courses.

WHY TEAMS CHOOSE IT

- Author courses from text, video, and documents — or let AI generate a whole course, quiz, or translation for you.
- Sequence courses into learning paths and auto-enroll new hires by role, department, or schedule.
- Auto-grade quizzes and issue branded PDF certificates with a public, no-login verification page.
- Keep compliance current with autonomous overdue-training and expiring-certification reminders.
- Run an internal course storefront — free, one-time, or subscription — with cart, promo codes, gifting, and reviews.
- Track completion, quiz performance, and compliance org-wide with exportable reports and manager dashboards.

CAPABILITIES

AI Content Creation

- ✓ Generate a complete course from a topic prompt
- ✓ Convert an uploaded document into a structured course
- ✓ Auto-generate quizzes from lesson content
- ✓ AI lesson-text editing and one-click course translation
- ✓ Per-feature admin toggles for each AI capability

Autonomous Compliance

- ✓ Auto-assign required courses to new hires
- ✓ Overdue-training and expiring-certification reminders
- ✓ Certificate-expiry re-enrollment rules
- ✓ AI Console with adjustable autonomy + approve/reject queue

Course & Lesson Authoring

- ✓ Lesson types: text, video, document, and embedded quiz
- ✓ Video from 5 providers or direct upload, with auto-transcription + chapters
- ✓ Prerequisite course gating
- ✓ Difficulty levels (beginner / intermediate / advanced)
- ✓ Draft → published → archived lifecycle with duplication
- ✓ Categories, bundles, and custom course fields
- ✓ SCORM / xAPI content packages — Uploaded as a lesson; hosted, played, and progress-tracked via an external SCORM engine.

Enrollment, Paths & Assignment

- ✓ Admin bulk enrollment
- ✓ Learner self-enrollment (configurable per course)
- ✓ Auto-enrollment rules (new hire, role-based, scheduled, cert-expiry)
- ✓ Rule preview, apply-now, and one-click undo of a rule run
- ✓ Learning paths that sequence multiple courses
- ✓ Due dates with overdue and due-soon tracking
- ✓ Resume from last-accessed lesson

Quizzes & Certifications

- ✓ Multiple-choice, true/false, and multiple-select questions
- ✓ Configurable passing score, attempt limits, and timed quizzes
- ✓ Immediate auto-grading, best-attempt tracking, reusable quiz library
- ✓ Auto-issued PDF certificate on completion, branded and numbered
- ✓ Public certificate verification page (no login required)
- ✓ Per-course or business-default expiry with renewal cycles
- ✓ Completing a course grants a verified skill — Hand-off to the separate Skills & Certifications app when a course awards a skill.

Reporting, Analytics & Manager Tools

- ✓ Enrollment, completion, and learner-progress reports
- ✓ Quiz-performance report (avg score, pass rate, time taken)
- ✓ Compliance-status report (overdue / due-soon / on-track)
- ✓ Analytics dashboards (courses, learners, quizzes, revenue)
- ✓ Manager dashboard with team oversight and reminder nudges
- ✓ CSV export on every report

Storefront, Partner Content & Reach

- ✓ Free, one-time, or subscription pricing with cart, checkout & promo codes
- ✓ Gift a course to a colleague
- ✓ Verified-purchase ratings, reviews, and wishlists
- ✓ Public SEO course catalog with guest browsing + sitemap
- ✓ Go1 & OpenSesame partner content sync and curated partner-course catalog with licensing
- ✓ AI course recommendations and skill-gap suggestions

Limits & Specs

Supported video providers	YouTube, Vimeo, Loom, Wistia, Bunny CDN, direct upload
Quiz question types	multiple-choice, true/false, multiple-select
Auto-enrollment rule types	new hire, role-based, scheduled, certificate-expiry

USE CASES

- **New hire onboarding training**
HR configures auto-enrollment rules so every new hire in the warehouse is assigned safety and compliance courses on day one.
- **Compliance certification tracking**
A training admin watches the compliance-status report for who's overdue or expiring, and lets autonomous reminders and cert-expiry rules re-enroll people before certifications lapse.
- **AI-built course from a document**
A subject-matter expert uploads an existing SOP or slide deck and converts it into a structured course with lessons and an auto-generated quiz in minutes.
- **Course performance analysis**
A training coordinator reviews the quiz-performance report to find questions where learners consistently fail, flagging lessons that need reworking.
- **Internal course storefront**
An L&D team publishes premium courses for one-time purchase or subscription, shares promo codes, and lets employees gift courses to teammates.
- **Partner content alongside your own**
An admin syncs the Go1 or OpenSesame library and assigns curated third-party courses next to internally authored content.

FAQ

Can employees self-enroll in courses?

Yes, when an admin enables self-enrollment. Courses can be opened for learners to join from the catalog, kept assignment-only, or auto-enrolled via rules based on new-hire status, role, a schedule, or a certificate expiring.

How do quizzes work?

Quizzes support multiple-choice, true/false, and multiple-select questions, each worth configurable points, with a passing score you set per quiz. You can limit attempts and add a time limit. Grading is automatic and scores appear immediately, and (when enabled) a course won't count as complete until the learner passes its quiz.

How do certifications and expiration work?

Completing a course auto-issues a branded PDF certificate with a unique number and a public verification page anyone can check without logging in. Certificates can expire on a per-course validity window or a business-wide default; expired certs can be renewed, and certificate-expiry enrollment rules can re-assign the course automatically before someone lapses.

Does Training support SCORM or xAPI content?

Yes. Add a lesson of type 'SCORM Package' and upload a SCORM 1.2/2004 or xAPI package as a .zip (up to 100MB) — it's hosted and played through an external SCORM engine, and the learner's progress, completion, and score sync back into the course automatically. You can also author lessons natively from text, video (YouTube, Vimeo, Loom, Wistia, Bunny, or direct upload), documents, and quizzes, or connect the Go1 or OpenSesame content marketplace for curated, licensable third-party courses.

Can I sell or gift courses?

Yes. Courses can be free, a one-time purchase, or a subscription. There's a shopping cart and checkout, promo/discount codes, the option to gift a course to a colleague, verified-purchase ratings and reviews, wishlists, and a public SEO catalog for guest browsing.

What can the AI do?

AI can generate a complete course from a topic prompt, convert an uploaded document into a structured course, generate quizzes from lesson content, edit lesson text, and translate a course into another language.

Autonomously, it can nudge learners about overdue training and expiring certifications and assign required courses to new hires, with an AI Console where admins set the autonomy level and approve or reject actions. Each AI capability has its own admin toggle.

How is Training licensed and priced?

Training requires a license and is enabled per tenant — an administrator turns it on for your business from the Apps Marketplace. Contact your MangoApps administrator about enabling it for your organization.

What's the difference between Training, Practice Hub, and Skills & Certifications?

Training is the LMS where people learn and are tested on knowledge — courses, lessons, quizzes, certificates, and compliance. Practice Hub is a separate app for rehearsing real conversations and presentations against an AI with scored feedback (the 'practice' step). Skills & Certifications is a separate system of record for what an employee is qualified in; when a Training course is set to award a skill, completing it grants a verified skill or certification there. They complement each other — Training hands completion signals off to Skills, and behavioral practice lives in Practice Hub.
