

PERFECTLY COMPLEMENT

Microsoft 365 + MangoApps

Perfectly Complement Microsoft 365 & MangoApps

Microsoft 365 customers often ask us: How does MangoApps work with Microsoft 365? What can MangoApps do that Microsoft 365 doesn't? Here are some of the common gaps in Microsoft 365 that MangoApps fills and why you need both systems.

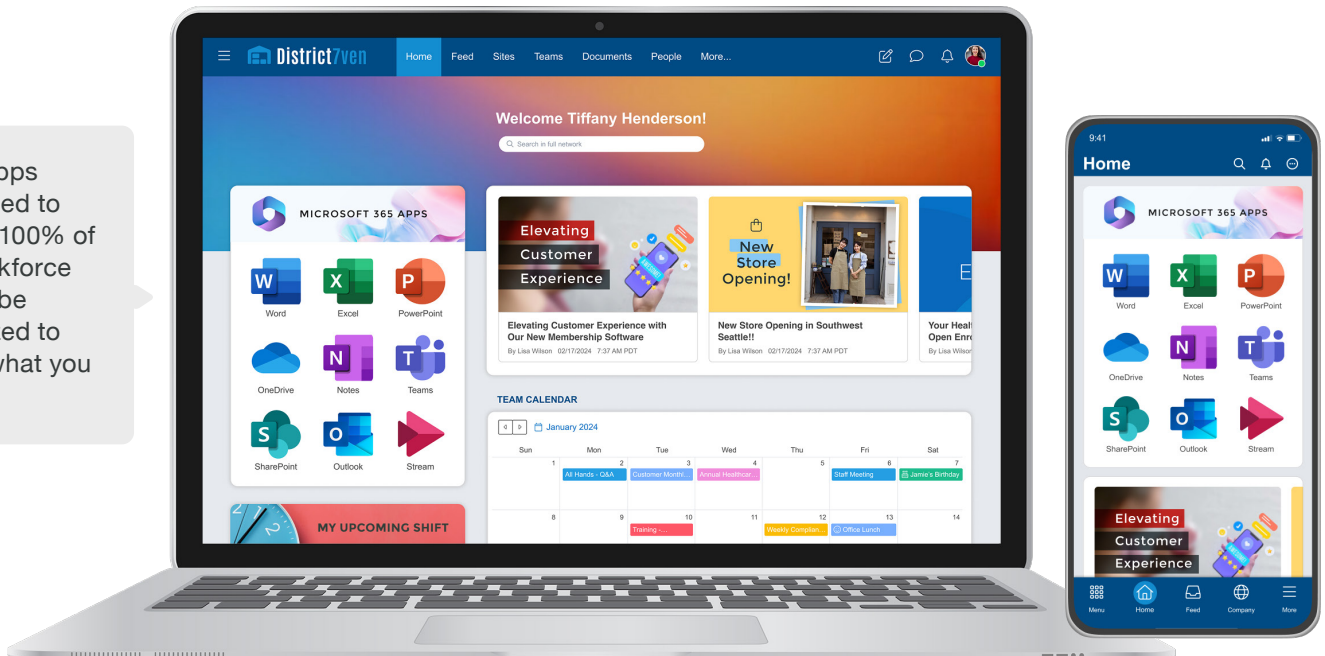

GAP #1

Not All Employees Need or Have Microsoft 365

Microsoft 365 is designed to increase the productivity of knowledge workers. It is not designed to connect 100% of the employee workforce. Hence, most companies in industries like healthcare, finance, manufacturing, retail, pro-services, and more do not buy Microsoft 365 for the majority of their employees. It is too costly and complex for what they need.

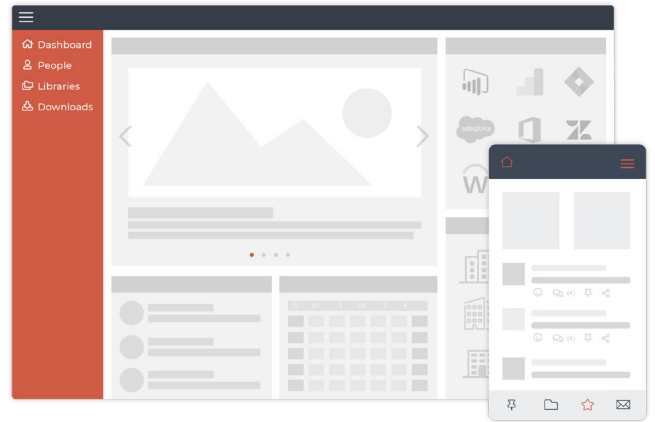

MangoApps is designed to connect 100% of your workforce and can be customized to exactly what you need.

GAP #2

SharePoint is Not a Modern Intranet

At its core, SharePoint is a content management system designed for storing documents. It doesn't have the elements that are needed for an employee-centric company intranet. Also, it is plagued by high costs, frustrated users, and low engagement. See our article on why MangoApps is the most popular SharePoint alternative.

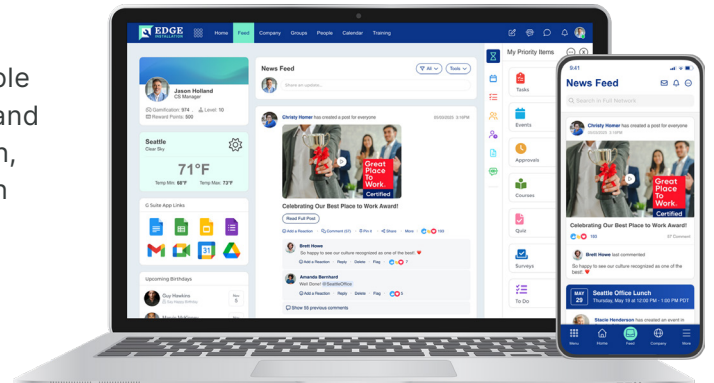

Give your business a mobile-first modern company intranet designed specifically to keep employees informed & engaged.

GAP #3

Enterprise Social Networking Functionality is Isolated

Instead of social networking powering the underlying people network, there is little to no integration between Yammer and other Microsoft 365 services. Overall, since the acquisition, Yammer features and functionality have not kept pace with the market.

MangoApps provides a best-in-class enterprise social networking experience throughout the platform.

As people are at the core of MangoApps, engagement-related capabilities are deeply integrated into the overall Employee experience.

GAP #4

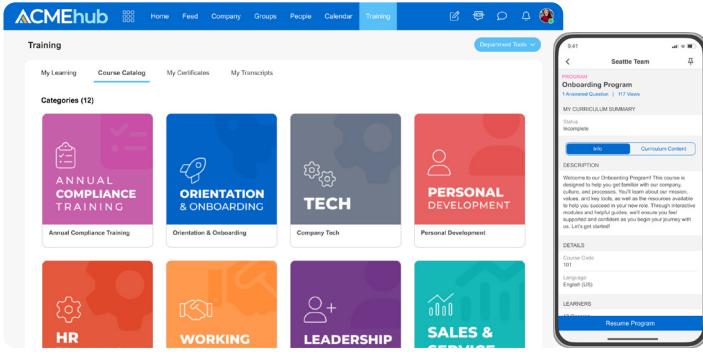

Microsoft 365 is Not an Employee Engagement Platform

Microsoft 365 is a productivity platform with great applications for spreadsheets, documents, email, and more. It doesn't have the capabilities to be an effective employee engagement solution. Core features like employee rewards & recognitions, targeted polls & surveys, and digital greetings that help you celebrate events are not present in Microsoft 365.

GAP #5

There is No Employee Training App

You either need to purchase an add-on software or rely on standalone LMS systems to enable training and learning management for your employees.

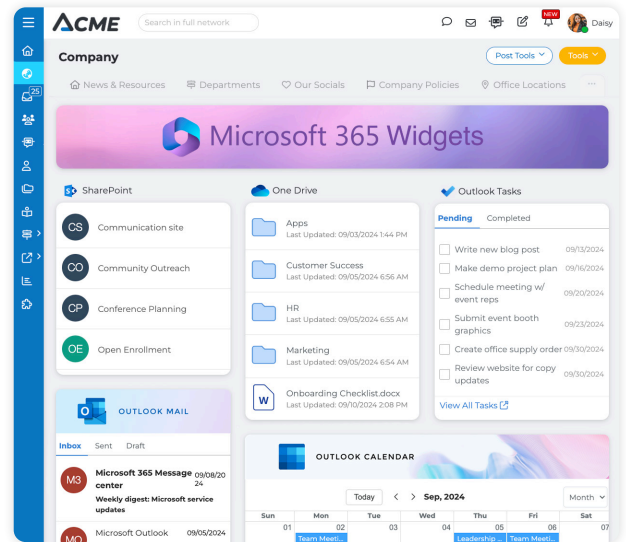

MangoApps fills this gap by providing a built-in LMS system designed for easy training and compliance.

GAP #6

No Dashboard That Brings Everything Together

Microsoft 365 doesn't have a personalized dashboard that brings everything together for employees. This lack of a single organized place for company resources and updates leaves employees feeling disorganized.

MangoApps dashboard fills this gap by providing deep integration with Microsoft 365 and other enterprise services on an easily-accessible dashboard.

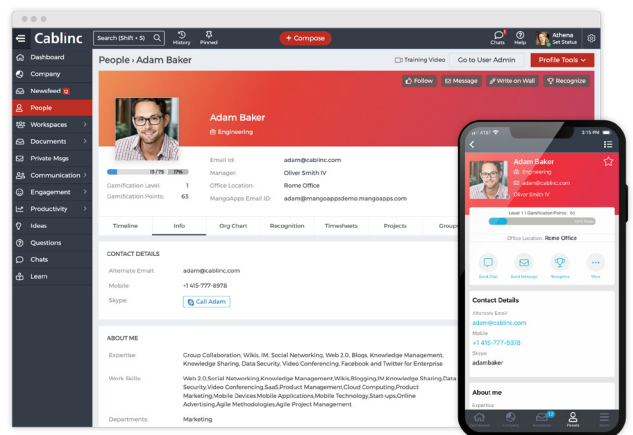

GAP #7

No Good Way to Find and Learn About Co-Workers

Microsoft 365 doesn't have a Directory app. There isn't a good way to manage company-wide access to detailed employee profiles, org chart, and more.

Mango Directory is like an internal LinkedIn for your employees. It is the fastest way to locate and learn about coworkers.

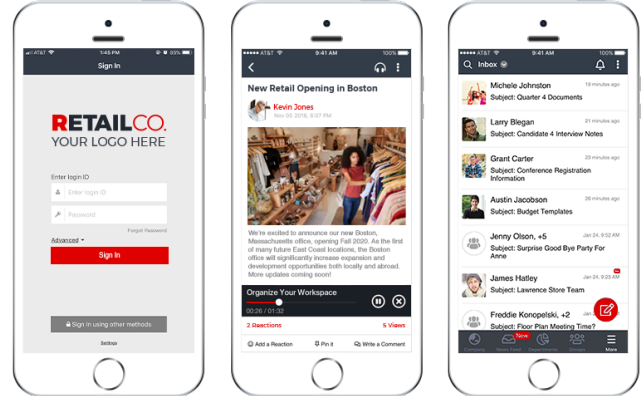

GAP #8

Office 365 is Not a Brandable Umbrella Company App

Without a company app that brings everything together for employees, it is very difficult to create a consistent and differentiated experience. Companies need a simple, streamlined app that employees can start their day with and rally around.

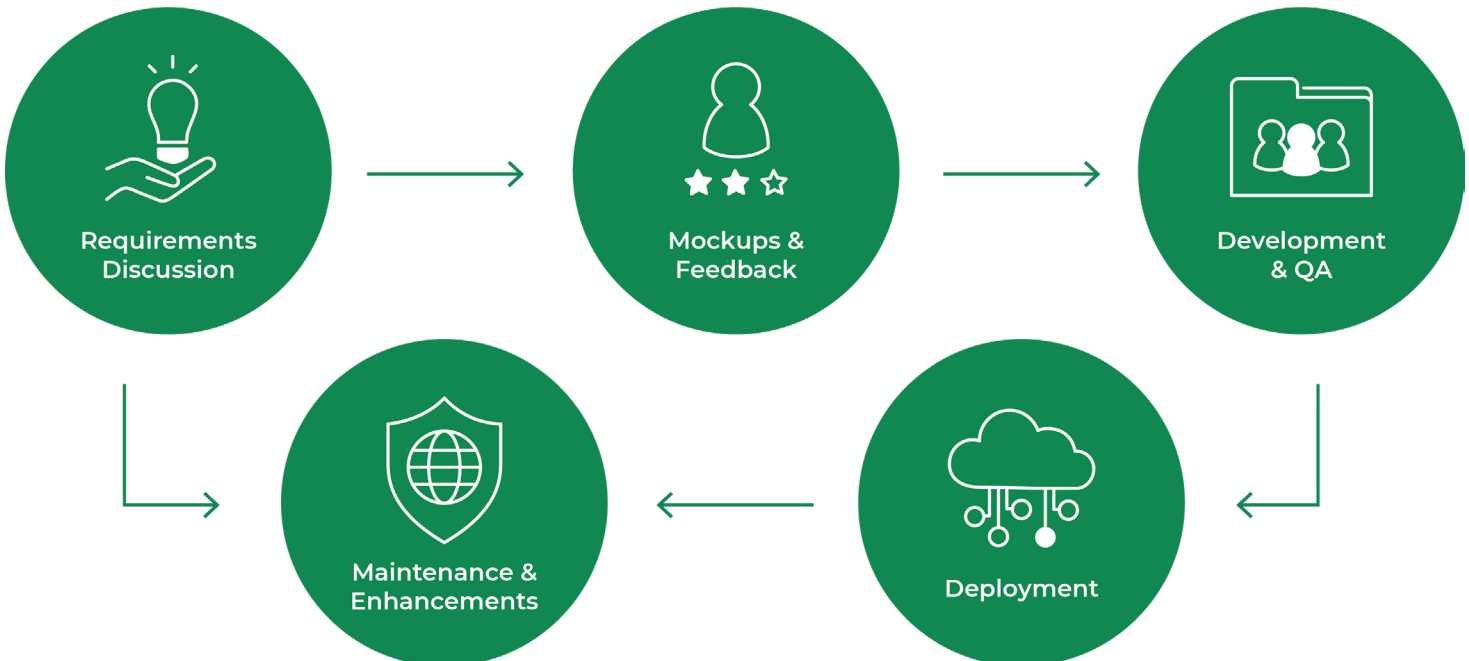

MangoApps enables you to create a differentiated, brandable experience that enhances your company's culture and brand among employees.

GAP #9

Complimentary Platform Strategy Helps You Move Fast

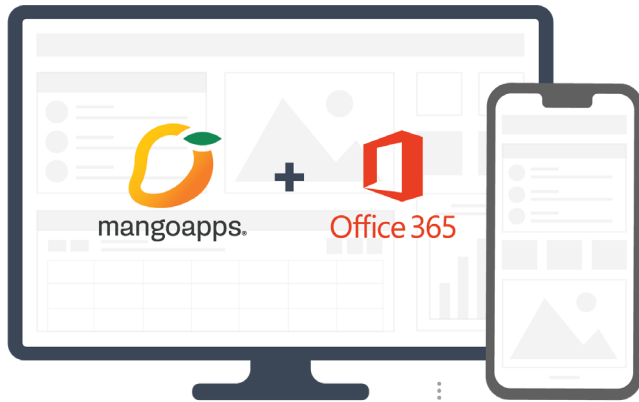

Having a second platform that is complementary to Microsoft 365 gives you options as your requirements evolve. Trying to do anything custom on the Microsoft 365 platform can easily blow up your budget and timelines.

As MangoApps is fully customizable and all custom development is done in-house, we can help you move fast and support the custom needs of your business

How MangoApps Helps

MangoApps for Microsoft 365 brings modern portal features to help Microsoft 365 customers create a central information, communication, and collaboration hub for their employees.

Microsoft 365 Integration Highlights

In addition to filling the gaps with MangoApps' native functionality, MangoApps also integrates deeply with Microsoft 365 services. This enables you to create one central place that both desk and non-desk workers can use as their digital workplace home.

Widgetpack Brings Microsoft Services to the Dashboard

Our Microsoft 365 widget pack allows you to add popular 365 services to your MangoApps dashboard to help create a central hub for employees.

Sharepoint & OneDrive

Easily search and add Sharepoint & One Drive files to updates, posts, wikis and more within MangoApps.

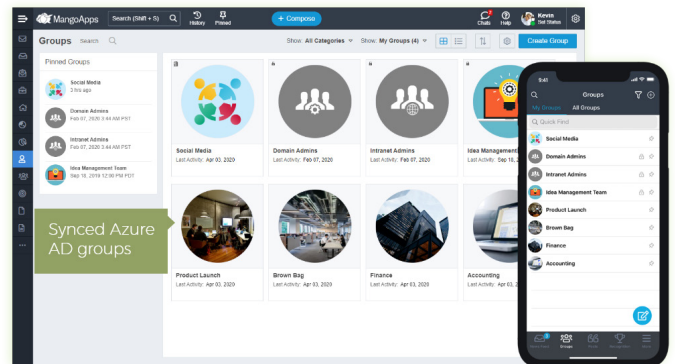

Viewing & Co-Authoring Documents

All Word, PowerPoint, and Excel files stored in MangoApps can be viewed right in the browser. Users can also create, edit, and co-edit Office documents directly in MangoApps. File locking and version management are automatically managed by MangoApps, ensuring that working with Office is easy and users always have access to important content.

Azure AD Groups and Users Profiles

Synchronize your Azure AD Groups and users' profile data with your Azure AD automatically.

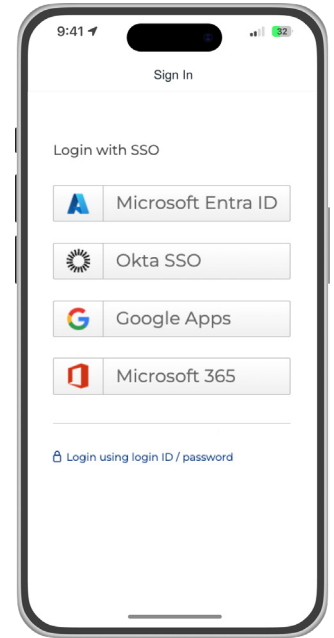

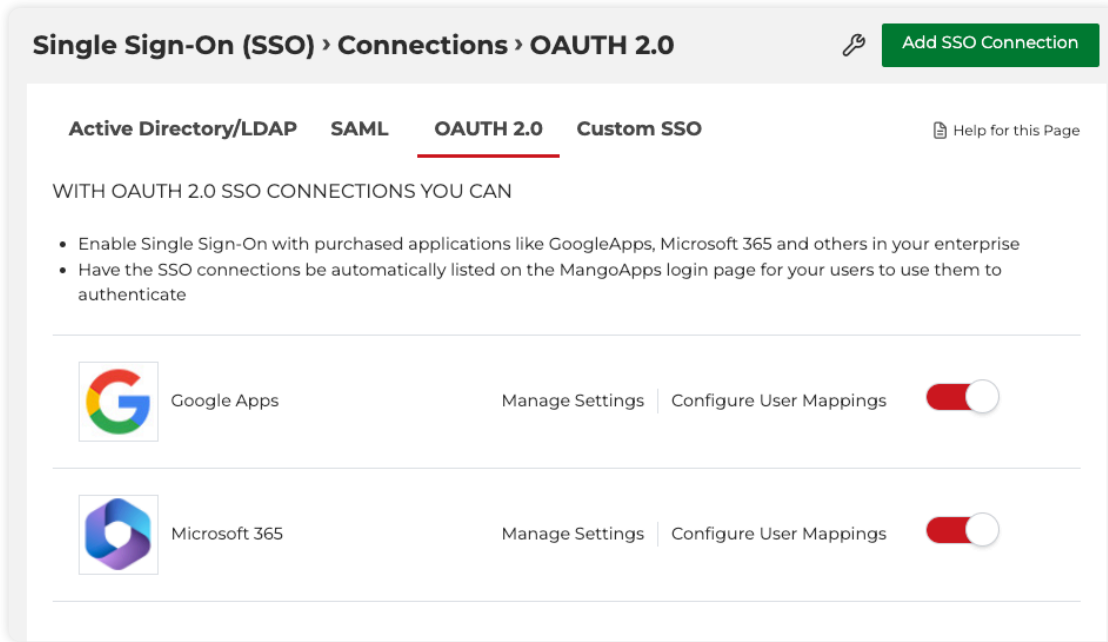

Run MangoApps on Microsoft Azure

Private cloud deployments of MangoApps are optimized to run on the Microsoft Azure Cloud Platform, ensuring you benefit from all the cutting-edge performance, reliability, security and compliance services Microsoft Azure offers.

Login Using Microsoft 365 or ADFS

The MangoApps Microsoft 365 connector enables organizations to use Microsoft 365 as a Single Sign-On provider. This ability allows employees to log in to MangoApps using their existing Microsoft 365 credentials.

You can also use MangoApps integration with ADFS so your employees can use their existing login credentials to access MangoApps through SSO.

TRANSFORM HOW YOUR COMPANY COLLABORATES, COMMUNICATES, & GETS WORK DONE.
